ROLE-SPECIFIC APPLICATION PACKETS

JUNIOR GAMEPLAY DEVELOPER Lead with game systems and authoring tools. Best for teams that need someone who can prototype controls, HUDs, map tools, interaction polish, and small public game loops. - Built terrain authoring, runtime, HUD, and playtest surfaces with screenshots and QA evidence a reviewer can inspect. - Prototype movement, lobbies, HUDs, abilities, bot modes, navigation polish, and survival loops across browser and native game projects. Tidefront StudioOcean DriftClaude Citizen	PYTHON / BLENDER TOOLS DEVELOPER Lead with artist-facing tooling and validation artifacts. Best for pipeline, technical art support, or tools teams that need Blender add-ons with practical controls and QA proof. - Build Blender Python and game-editor tools for terrain generation, mesh cutting, asset catalogs, bridge checks, export paths, and visual QA. - Frame tools around artist outcomes: before/action/after, useful data handoff, screenshots, and repeatable validation. Blender WorkflowBlender PipelineTerrainForge
TECHNICAL ARTIST ASSISTANT Lead with the bridge between visuals and engineering constraints. Best for teams that need scene tools, 3D UI, procedural assets, and someone comfortable moving between art goals and code. - Translate visual goals into working editors, asset catalogs, procedural scenes, and exportable data. - Work across Three.js, Blender API, native rendering experiments, and practical validation screenshots. Codex 3D StudioProcedural OceanBlender Tools	CREATIVE TECHNOLOGIST Lead with interactive WebGL, automation, and sensory systems. Best for teams or projects that want unusual browser experiences, generative visuals, workflow automation, and practical product polish. - Ship interactive WebGL, canvas, audio-analysis, and AI workflow surfaces with usable controls. - Turn experimental ideas into public demos, screenshots, case-study copy, and concrete next steps. DestimmerCodexForWorkflowSongDeconstructor

SELECTED PROJECT PROOF

PROJECT EVIDENCE LINES

Studio first: Lead with the most complete tool surface.
Game/tools developer building terrain authoring workbenches, 3D runtime prototypes, QA evidence surfaces, and playable browser systems.

OCEAN MAP AUTHORIZING WORKBENCH**Tidefront Terrain Studio**

A dark technical map-authoring workbench for Ocean Drift/Tidefront terrain, with sculpting lanes, architecture stamps, terrain bounds, playtest handoff, and visible QA evidence.

- Built a Studio surface that lets terrain work stay visual: generate, sculpt, stamp architecture, frame bounds, export heightmaps/JSON, and jump into playtest preview.
- Connected authoring controls to real terrain concepts such as reef canyons, lagoon shelves, kelp banks, reef crests, map bounds, surface detail, masks, and material states.

TypeScript

Three.js

Terrain Studio

Playwright

Blender bridge

BLENDER BRIDGE AND ASSET CATALOG TOOLING**Tidefront Blender + Asset Workflow**

A production-tools slice around moving Tidefront terrain and asset data between Studio, runtime catalogs, Blender bridge workflows, and reviewable QA surfaces.

- Worked on the toolchain around terrain sync, Blender scene reads, local bridge checks, project JSON, heightmap export, and runtime asset catalog handoff.
- Built recruiter-readable proof around actual workflow surfaces: shared asset catalog, Studio QA lane, terrain workspace, and Blender bridge controls.

Python

Blender API

TypeScript

asset catalogs

JSON export

EXTERNAL GAME PROJECT CONTRIBUTION**Claude Citizen Solar Atlas Contribution**

A contribution to another developer's browser space game focused on Solar Atlas navigation polish, pointer-lock safety, orbit selection clarity, and screenshot-ready visual presentation.

- Verified the upstream history contains a merge from CurioCrafter's solar-atlas navigation polish branch, with authored commits present on the remote history.
- Worked inside an existing codebase instead of a solo repo, keeping interaction changes aligned with the project's flight, atlas, and navigation surfaces.

TypeScript

Vite

Three.js

game UI

Git collaboration

Game systems: Use deeper game systems as case-study proof.

Prototype movement, HUDs, lobbies, bot modes, navigation polish, survival pressure, and simulation loops across browser and native game projects.

Blender tools: Turn Blender work into a production-tools story.

Build Blender Python and game-editor workflows for terrain generation, mesh operations, asset catalogs, export handoff, and validation artifacts.

Utility products: Show product judgment through practical tools.

Ship local-first utilities and automation tools with safety-conscious UX, screenshots, and delivery checks.

BROWSER 3D SURVIVAL GAME**Ocean Supremacy Web / Ocean Drift**

A multiplayer-ready underwater survival prototype with third-person fish controls, lobby flow, HUD, growth systems, and water rendering quality tiers.

- Built player movement, feeding, sprint, ability, HUD, lobby, and match-selection flows.
- Iterated on underwater rendering concepts including clarity, caustics, scattering, refraction shimmer, light shafts, and particulate haze.

TypeScript Three.js WebGL2 Vite WebSocket architecture

BROWSER TACTICAL FPS VERTICAL SLICE**TacOps**

An original browser tactical FPS prototype with bot matches, friend lobbies, invite links, campaign/objective modes, loadouts, gadgets, and authoritative multiplayer architecture.

- Built a Three.js/Vite client paired with a Colyseus server for room state, projectiles, tactical modes, bots, and lobby flow.
- Created multiple playable modes including campaign, tactical bots, tactical friends, deathmatch vs bots, and deathmatch with friends.

TypeScript Three.js Colyseus Vite authoritative server

PRODUCTION-TOOLS CASE STUDY**Blender Tools Pipeline**

A focused tools-pipeline story around real Blender add-ons: PBR texture assignment, preview-first retopo planning, asset-shelf export, catalog metadata, and visual QA artifacts.

- Ran EasyTexture through Blender 4.5.11 to apply Base Color, Normal, Roughness, and Packed ORM channels, then captured the resulting PBR material output.
- Ran AI Retopo Assist through Blender 5.1.2 to preview guide geometry and apply a mostly quad retopo target from a stroke-driven plan.

Python Blender API PBR materials retopo planning export tooling

BLENDER PROCEDURAL TERRAIN ADD-ON**TerrainForge**

A Blender terrain-generation add-on for preview meshes, segmented worlds, tiled heightmap export, texture layers, cave volumes, LOD/detail bake, and professional selected-tile baking.

- Built a terrain workflow around preview generation, export validation, tiled worlds, segmented region editing, local tile overrides, stamps, masks, and recipe scripts.
- Added professional bake output for dense selected-tile meshes with height, normal, cavity, curvature, albedo, UVs, materials, metrics, and manifests.

Python Blender API NumPy heightmaps QA campaign tooling

EXPERIENCE

Independent Creative Technology Developer

CurioCrafter / Independent Projects | 2023 - Present

- Build game prototypes, Blender add-ons, desktop apps, AI workflow tools, and creative production systems.
- Prototype procedural environments, player controls, HUD/UI, camera systems, real-time rendering, and simulation behavior.
- Operate a high-volume AI creative channel with measurable audience growth and viral video performance.

Apprentice Electrician

Productive Electric LLC / Malm Electrical Contractors | 2021 - 2023

- Supported commercial electrical installation, jobsite preparation, safety procedures, materials handling, and field troubleshooting.

ROLE FIT

Junior Gameplay Developer

Prototype loops, HUDs, camera feel, simulation rules, and browser-playable vertical slices.

Python / Blender Tools Developer

Build artist-facing add-ons, validation scripts, export flows, and visual QA artifacts.

Technical Artist Assistant

Bridge visual goals and engineering constraints across meshes, terrain, materials, and 3D UI.
