

BEST FIT

Junior game developer, Python/Blender tools, technical art support

LEAD PROOF

Ocean Drift, Destimmer, TacOps, Blender Tools Pipeline

STRONGEST ANGLE

Playable prototypes plus practical tools that remove production friction

NEXT POLISH

Turn two private/local projects into public demo reels with short postmortems

SELECTED PROJECT PROOF

PLAYABLE AI BEHAVIOR DEMO

Creature Behavior Lab

A compact browser simulation that makes creature steering, hunger, fear, target choice, flock spacing, and threat response readable in one public demo.

- Separated simulation state from rendering so agents own behavior while Canvas handles only playfield drawing.
- Added food placement, threat placement, calm/reset controls, speed tuning, trails, and a DOM debug HUD.

WEBGL GENERATIVE SENSORY ARTWORK

Destimmer

A self-contained browser artwork for kinetic sacred geometry, psychedelic 3D trance scenes, interactive polytope/ribbon swarms, generative harmonic music, and low-friction sensory stimulating.

- Built a full-screen WebGL-first experience with animated cathedral ribs, glass shards, caustic veils, light shafts, point sprites, reactive lighting, and tunnel camera motion.
- Created a studio control surface for visuals, motion, image sources, music generation, instrument mapping, 3D parameters, trips, presets, and chrome-free focus mode.

BROWSER 3D SURVIVAL GAME

Ocean Supremacy Web / Ocean Drift

A multiplayer-ready underwater survival prototype with third-person fish controls, lobby flow, HUD, growth systems, and water rendering quality tiers.

- Built player movement, feeding, sprint, ability, HUD, lobby, and match-selection flows.
- Iterated on underwater rendering concepts including clarity, caustics, scattering, refraction shimmer, light shafts, and particulate haze.

RESUME PROOF LINES

Playable first: Lead with demos a reviewer can touch.

Game/tools developer building playable browser demos, simulation systems, WebGL experiences, and verified portfolio artifacts.

Game systems: Use private game depth as case-study proof.

Prototype movement, HUDs, lobbies, bot modes, survival pressure, and simulation loops across browser and native game projects.

Blender tools: Turn the add-on suite into a production-tools story.

Build Blender Python add-ons for terrain generation, mesh cutting, remeshing, rig/export workflows, and validation artifacts.

Utility products: Show product judgment through practical tools.

Ship local-first utilities and automation tools with safety-conscious UX, screenshots, and delivery checks.

BROWSER TACTICAL FPS VERTICAL SLICE

TacOps

An original browser tactical FPS prototype with bot matches, friend lobbies, invite links, campaign/objective modes, loadouts, gadgets, and authoritative multiplayer architecture.

- Built a Three.js/Vite client paired with a Colyseus server for room state, projectiles, tactical modes, bots, and lobby flow.
- Created multiple playable modes including campaign, tactical bots, tactical friends, deathmatch vs bots, and deathmatch with friends.

ADD-ON SUITE AND VALIDATION WORKFLOW

Blender Tools Pipeline

A broader Blender tooling suite covering terrain generation, mesh cutting, remeshing, character generation, rig setup, hard-surface cutters, and an in-Blender AI command surface.

- Inspected TerrainForge, Laser Saw, CurioMesh, Armaturizer, Extractionator, GenerateHuman, and Codex Blender Agent project folders and READMEs.
- GenerateHuman includes deterministic character generation, visual QA galleries, engine export presets, and GLB/reimport checks.

BLENDER PROCEDURAL TERRAIN ADD-ON

TerrainForge

A Blender terrain-generation add-on for preview meshes, segmented worlds, tiled heightmap export, texture layers, cave volumes, LOD/detail bake, and professional selected-tile baking.

- Built a terrain workflow around preview generation, export validation, tiled worlds, segmented region editing, local tile overrides, stamps, masks, and recipe scripts.
- Added professional bake output for dense selected-tile meshes with height, normal, cavity, curvature, albedo, UVs, materials, metrics, and manifests.

EXPERIENCE

Independent Creative Technology Developer

CurioCrafter / Independent Projects | 2023 - Present

- Build game prototypes, Blender add-ons, desktop apps, AI workflow tools, and creative production systems.
- Prototype procedural environments, player controls, HUD/UI, camera systems, real-time rendering, and simulation behavior.
- Operate a high-volume AI creative channel with measurable audience growth and viral video performance.

Apprentice Electrician

ROLE FIT

Junior Gameplay Developer

Prototype loops, HUDs, camera feel, simulation rules, and browser-playable vertical slices.

Python / Blender Tools Developer

Build artist-facing add-ons, validation scripts, export flows, and visual QA artifacts.

Technical Artist Assistant

Bridge visual goals and engineering constraints across meshes, terrain, materials, and 3D UI.

Productive Electric LLC / Malm Electrical Contractors | 2021 - 2023

- Supported commercial electrical installation, jobsite preparation, safety procedures, materials handling, and field troubleshooting.
