RESUME

Game Developer + Creative Tools

Entry-level game and creative tools developer with hands-on experience building Python/Blender add-ons, browser-based 3D game prototypes, simulation systems, desktop applications, and AI-assisted creative workflows. Creator of CurioCrafter, an AI-powered creative YouTube channel with 79.9K subscribers, 568 videos, and more than 100 million total views. Seeking junior roles in game development, gameplay prototyping, tools programming, Blender pipeline tools, technical art, or creative technology.

Python tools

Blender add-ons

Game prototypes

3D workflows

AI creative systems

TECHNICAL FOCUS

Game / 3D

Blender Python API, Three.js, WebGL2, DirectX 12, HLSL, procedural generation, gameplay prototyping, simulation systems, camera controls, HUD/UI.

Languages

Python, TypeScript, JavaScript, C++, C#, SQL basics.

Apps / Platforms

Electron, React, Next.js, Node.js, Express, Vite, Prisma, SQLite, Tailwind CSS, GitHub.

AI / Creative

Sora 2, Veo 3, ComfyUI, prompt engineering, generative video workflows, AI-assisted development, audience-focused iteration.

SELECTED PROJECTS

CurioCrafter - AI-Powered Creative Video Channel

YouTube Shorts, AI video production, prompt engineering

- Built and operate CurioCrafter, an AI-powered creative channel with 79.9K subscribers, 568 videos, and 100M+ total views.
- Produced multiple viral videos with multimillion-view performance, including shorts above 18.5M, 16.9M, 10.2M, 8.3M, and 8.1M views.
- Developed a repeatable high-volume workflow for brainstorming, selecting, refining, publishing, and performance-reviewing AI video concepts.

CurioMesh - Blender Quad Remeshing Add-on

Python, Blender API, mesh processing, technical art tools

- Developed a Blender add-on for automatic quad remeshing and retopology workflows with artist-facing controls.
- Built tooling around mesh cleanup, UV/material preservation, projection, quality presets, and remeshing metrics.
- Demonstrates Python tool development, Blender scripting, mesh-processing logic, and technical art pipeline thinking.

Ocean Supremacy Web / Ocean Drift - Underwater Survival Game

TypeScript, Three.js, WebGL2, Vite, WebSocket architecture

- Built a browser-based underwater survival game prototype with third-person fish gameplay, movement controls, feeding, growth/evolution mechanics, HUD, lobby flow, and multiplayer-ready architecture.
- Worked with underwater rendering concepts including water clarity, caustics, scattering, refraction shimmer, light shafts, particulate haze, and WebGL2 quality tiers.
- Demonstrates game prototyping, interactive 3D development, UI/HUD design, rendering awareness, and iterative visual polish.

RESUME CONTINUED

Projects, Experience + Education

ADDITIONAL SELECTED PROJECTS

OrganismEvolution - Artificial Life Simulation Prototype

C++20, DirectX 12, HLSL, CMake, simulation systems

- Built a real-time artificial-life simulation prototype with procedural terrain, creature systems, water rendering, grass/tree rendering, camera controls, save/load, replay, and profiling.
- Developed early creature behavior systems involving movement, energy, predator/prey interactions, and genetic/neural behavior scaffolding.
- Demonstrates systems-level game programming interest, procedural content, simulation architecture, and performance-oriented thinking.

Blender Alignment Suite - 3D Workflow Add-on

Python, Blender API, tool development

- Created a Blender 4.5 add-on for alignment, distribution, mirroring, cursor/origin tools, and edit-mode vertex alignment.
- Implemented object alignment along X/Y/Z axes, equal-gap distribution, mirror workflows, and origin/cursor helper operations.
- Designed a simple N-panel UI focused on practical day-to-day Blender workflow improvements.

CodexForWorkflow - AI-Guided Workflow Command Center

TypeScript, Electron, Playwright, AI workflow automation

- Built a Windows desktop command center for AI-guided screen observation, workflow planning, and controlled browser automation.
- Implemented visible action planning, approval gates, workflow presets, local safety controls, and deterministic demo screenshots.
- Demonstrates desktop app development, automation design, AI workflow tooling, TypeScript/Electron development, and product thinking.

Disk Space Inspector - Windows Storage Analysis App

C#, desktop app development, SQLite, data visualization

- Built a Windows desktop utility that scans local drives, stores local snapshots, visualizes disk usage, and stages cleanup recommendations for review.
- Designed safety-first cleanup workflows that explain files and paths rather than automatically deleting user data.
- Added screenshot-based documentation, release packaging, and user-facing guidance.

TaskerADHD - Local-First Productivity App

Electron, React, TypeScript, SQLite, Prisma, AI/voice features

- Built a local-first productivity app with task boards, time tracking, calendar workflows, energy-aware planning, and voice-assisted task capture.
- Used Electron, React/Next.js, TypeScript, SQLite/Prisma, and local storage patterns.
- Designed privacy-conscious workflows with local data storage and optional API-key-based AI features.

EXPERIENCE

Independent Creative Technology Developer

CurioCrafter / Independent Projects | 2023 - Present

- Build game prototypes, Blender add-ons, desktop apps, AI workflow tools, and creative production systems using Python, TypeScript, C++, C#, Blender, Three.js, Electron, and AI-assisted development tools.
- Prototype systems involving procedural environments, creature behavior, player controls, HUD/UI, camera systems, and real-time rendering.
- Operate CurioCrafter, a high-volume AI creative channel with measurable audience growth and viral video performance.

Apprentice Electrician

Productive Electric LLC / Malm Electrical Contractors | 2021 - 2023

- Supported commercial electrical installation, jobsite preparation, safety procedures, materials handling, and field troubleshooting in structured technical environments.

EDUCATION + RECOMMENDED TRAINING

Trapper Creek Job Corps CCC High School

High School Completion, 2021

Completed high school and pre-apprentice electrician training.

Recommended next credentials to add after completion:

- CS50P: Introduction to Programming with Python
- Unity Certified User: Programmer
- PCEP Certified Entry-Level Python Programmer

Portfolio Media Plan

1. Main Demo Reel

Make this the first LinkedIn Featured item and the first button on the portfolio homepage. Keep it 60-90 seconds, hiring-focused, and labeled by project and technology.

- 0-5s: Andrew Rainsberger - Entry-Level Game Developer / Python + Blender Tools.
- 5-20s: Ocean Supremacy Web gameplay: fish movement, HUD, feeding, evolution, underwater rendering.
- 20-35s: CurioMesh and Blender Alignment Suite: before/after, panel UI, tools in action.
- 35-50s: OrganismEvolution: terrain, creatures, profiler/debug UI, camera movement.
- 50-65s: CodexForWorkflow, Disk Space Inspector, TaskerADHD: desktop tool polish.
- 65-80s: CurioCrafter proof: fast montage plus 79.9K subscribers and 100M+ views.

2. LinkedIn Featured Section

Use 4-5 items only. A curated set looks serious; too many links looks scattered.

- Featured 1: Game & Creative Tools Demo Reel.
- Featured 2: CurioCrafter - AI-powered channel with 100M+ views.
- Featured 3: GitHub portfolio: github.com/CurioCrafter.
- Featured 4: Ocean Supremacy Web gameplay demo.
- Featured 5: CurioMesh Blender Python tool demo.

3. GitHub README Media Checklist

Every featured repository should look like a real product page, not a code dump.

- Top: one hero screenshot or GIF directly under the project description.
- Add a Demo section with video link, screenshots, and build/run instructions.
- Add What I Built, Tech Stack, Features, What I Learned, and Current Status.
- For prototypes, say what works and what is still experimental. Honesty improves credibility.
- Pinned repos should include screenshots before being used for job applications.

4. Screenshots By Project

Capture screenshots that prove both visual quality and engineering substance.

- Ocean Supremacy Web: lobby, behind-fish camera, HUD, underwater scene, gameplay GIF.
- CurioMesh: Blender N-panel, before/after mesh, metrics/report output, remesh GIF.
- Blender Alignment Suite: panel UI, align/distribute before/after, mirror/cursor GIF.
- OrganismEvolution: terrain/creatures, debug profiler, day/night or environment rendering.
- Desktop apps: dashboard, core workflow, settings/safety page, release/download screenshot.

Portfolio Homepage Order

- 1. Hero: Andrew Rainsberger - Entry-Level Game Developer / Python & Blender Tools Developer.
- 2. Proof strip: 100M+ views, 79.9K subscribers, 568 videos, Python/Blender tools, 3D game prototypes.
- 3. Project cards in this order: Ocean Supremacy Web, CurioMesh, Blender Alignment Suite, OrganismEvolution, CodexForWorkflow, Disk Space Inspector, TaskerADHD, CurioCrafter.
- 4. Each card gets a screenshot/GIF, 1-sentence description, tech stack, GitHub link, demo link, and short case study.
